

# Breakdown of PDF Contents

Last class we talked about how to generate a PDF from an InDesign document. Likewise, you were shown how to create a link from your DW design to the process.pdf.

**Again, all requirements stated below are NOT for print classes. This list is strictly for web purposes:**

Page 1: coversheet; show your name and course title: GD160

Page 2: statement of intent: 2 or 3 paragraphs.

Page 3: three to five screen captures showing active web sites you are emulating;

- each picture should be cropped/resized to 800 x 600 pixels, and then scaled down in ID.
- type web address under each picture.

Page 4: catalog of five to ten images which influenced your theme;

- these need not appear in the design but are a source of possibilities
- these are further declarations of your intentions

Page 5: scan of a detailed sketch/thumbnailed of your site

Page 6: screen capture of Photoshop file in process

Page 7: screen capture of Dreamweaver file in process

Page 8: list of ten possible domain names; this list is composed BEFORE checking their availability

Page 9: state your free domain name and show a screen capture from 1and1.com

process.pdf

# possible domains

## Your web site's name

In the space provided compose 20 possible titles for your site. Over the course of the next few days you will check their status to see if they are available for your use.

The first three options can be variations on your given name.

01. \_\_\_\_\_
02. \_\_\_\_\_
03. \_\_\_\_\_
